# Semantic Clarification of the Representation of Procedures and Diseases in SNOMED CT

Stefan Schulz

Medical Informatics,  
Freiburg University Hospital  
(Germany)

Udo Hahn

Computational Linguistics  
Jena University  
(Germany)

Jeremy Rogers

Medical Informatics  
University of Manchester  
(UK)

# Context:

## SNOMED CT (Clinical Terms)

---

- Comprehensive clinical terminology system
- Constructed by merging, expanding, and restructuring SNOMED RT and Clinical Terms Version 3 (former Read Codes).
- 364,000 concepts, 984,000 terms, 1.45 million defined relationships between concepts
- Government agreements in U.S. & U.K.
- Increasing interest into SNOMED CT in other countries

# SNOMED CT

## OAV and DL notation

- Object – Attribute – Value (OAV) Triplets
- Objects and Values are SNOMED “concepts”
- Attributes are SNOMED “relations”

SNOMED Concept 1	SNOMED Relationship	SNOMED Concept 2
<i>Renal glomerular disease</i>	<i>is_a</i>	<i>Renal disease</i>
<i>Renal glomerular disease</i>	<i>has_finding_site</i>	<i>Kidney</i>
<i>Glomerulum</i>	<i>part_of</i>	<i>Kidney</i>

### ■ Description Logics (DL) representation:

cf. Kent Spackman, AMIA 2002

*Renal glomerular disease*  $\sqsubseteq$  *Renal disease*

*Renal glomerular disease*  $\sqsubseteq \exists$  *has\_finding\_site.Kidney*

*Glomerulum*  $\sqsubseteq \exists$  *part-of.Kidney*

Syntax	Semantics
$C$	$\{d \in \Delta^{\mathcal{I}} \mid \mathcal{I}(C) = d\}$
$R$	$\{(d, e) \in \Delta^{\mathcal{I}} \times \Delta^{\mathcal{I}} \mid \mathcal{I}(R) = (d, e)\}$
$\exists R.C$	$\{d \in \Delta^{\mathcal{I}} \mid R^{\mathcal{I}}(d) \cap C^{\mathcal{I}} \neq \emptyset\}$
$C \sqsubseteq D$	$C^{\mathcal{I}} \subseteq D^{\mathcal{I}}$

cf. Baader et al. Description Logics Handbook

# Objective of this talk

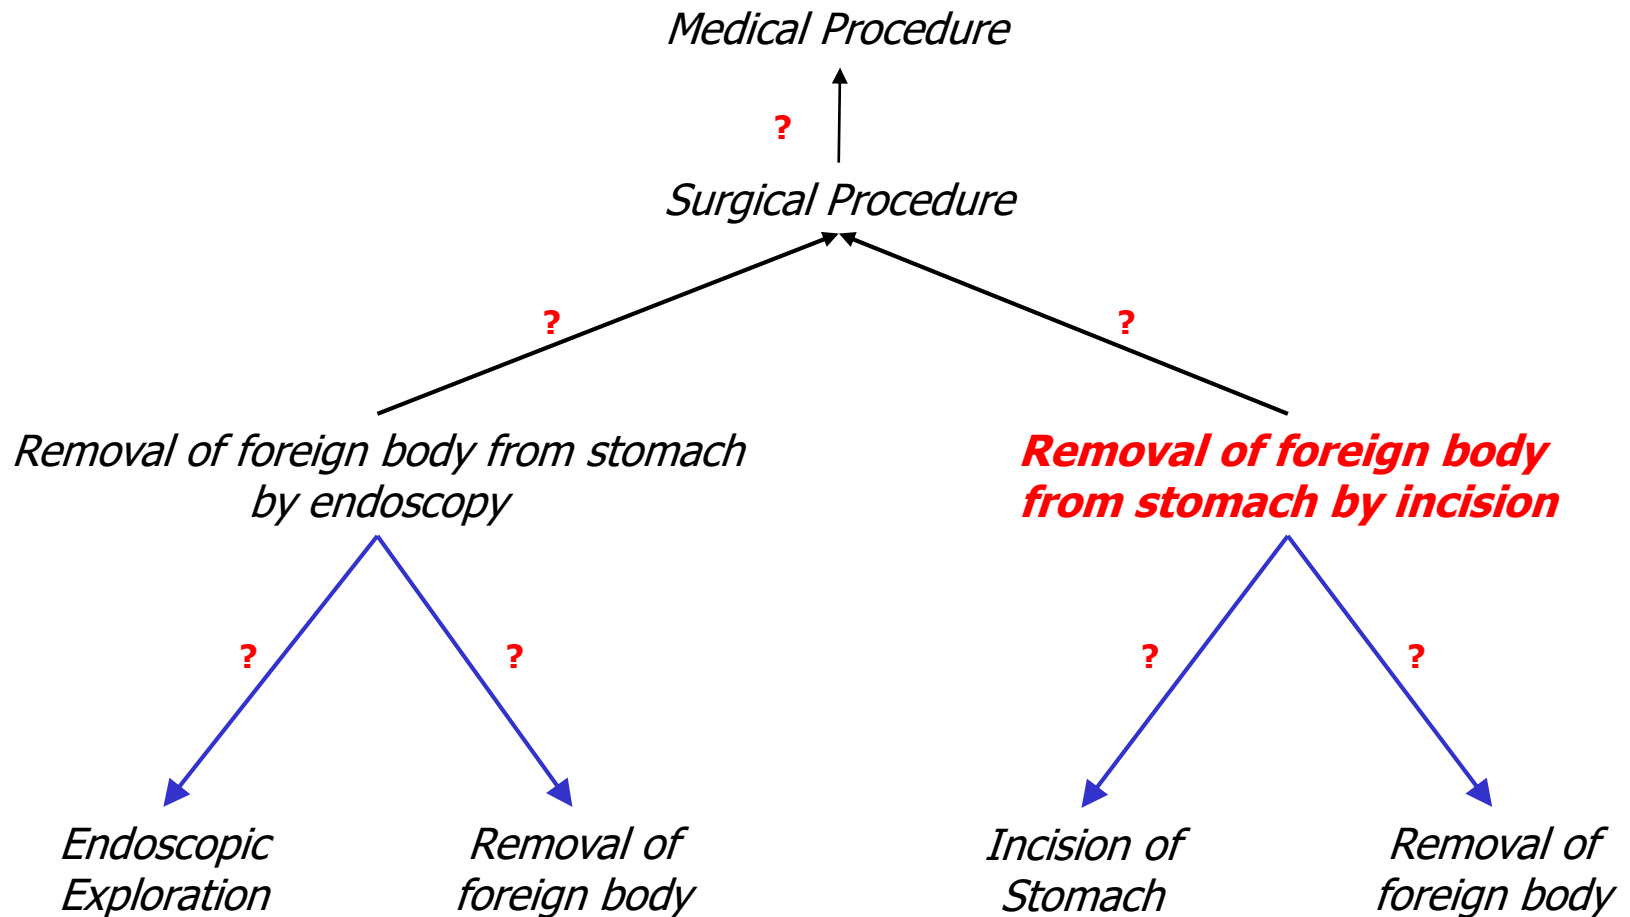

---

- Ontological Inquiry of the representation of Processes in SNOMED CT
- Clarification of the meaning of the “relationship group” attribute in SNOMED CT
- „Process“ in the sense of
  - Diagnostic or Therapeutic Procedures
  - Pathological and Physiological Processes

*Removal of foreign body from stomach by incision*

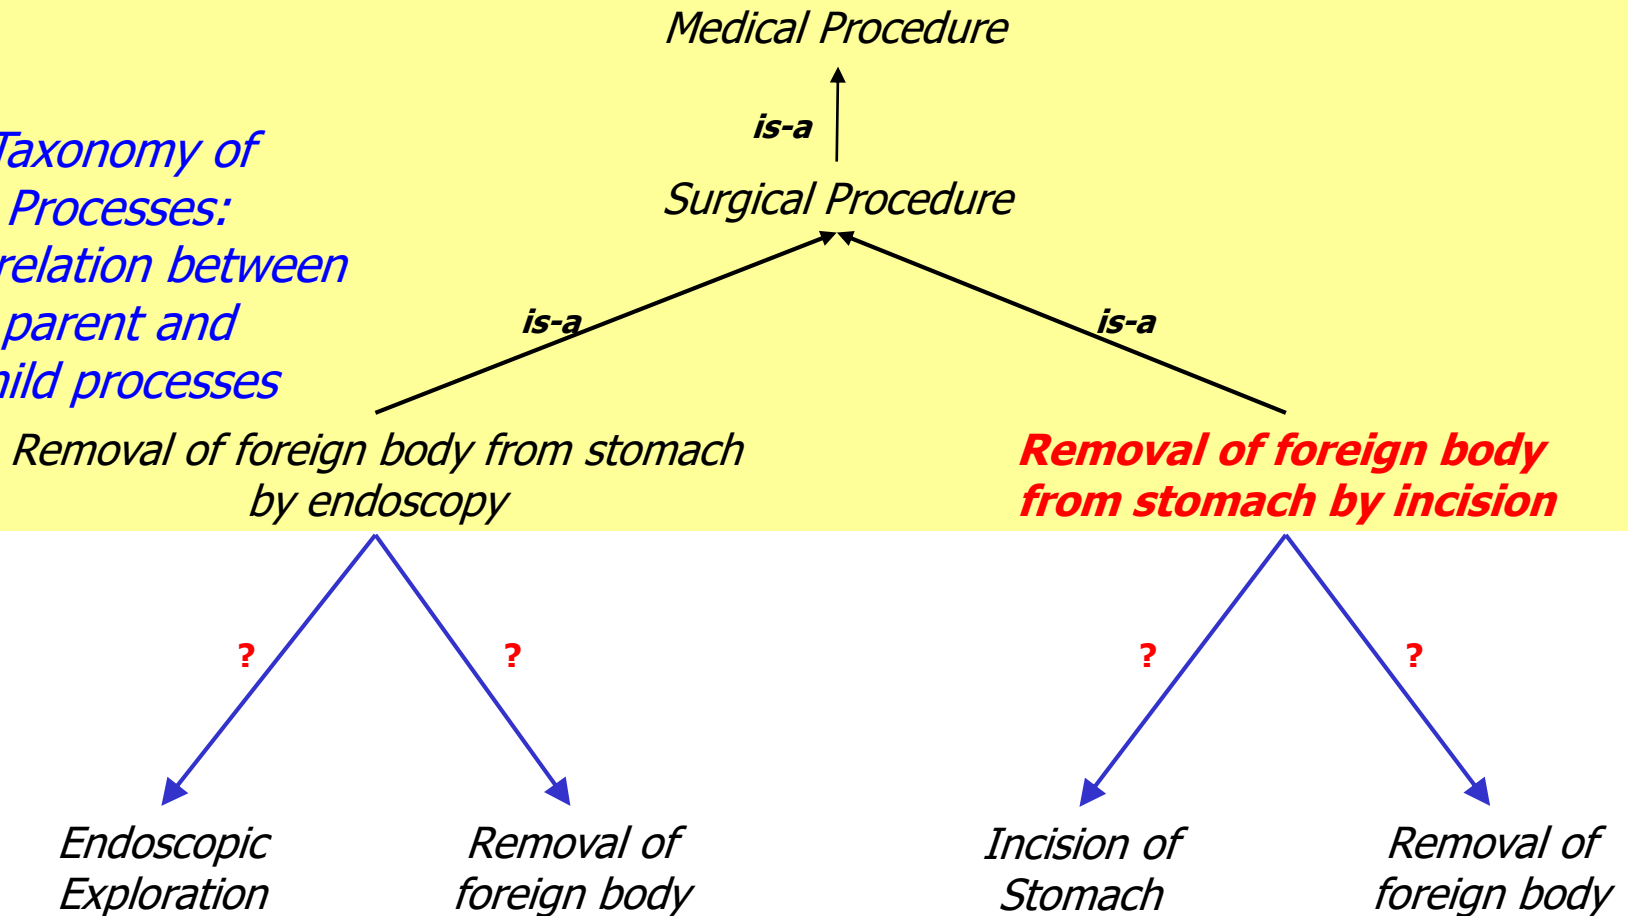

# Hierarchical Arrangement of Processes

---

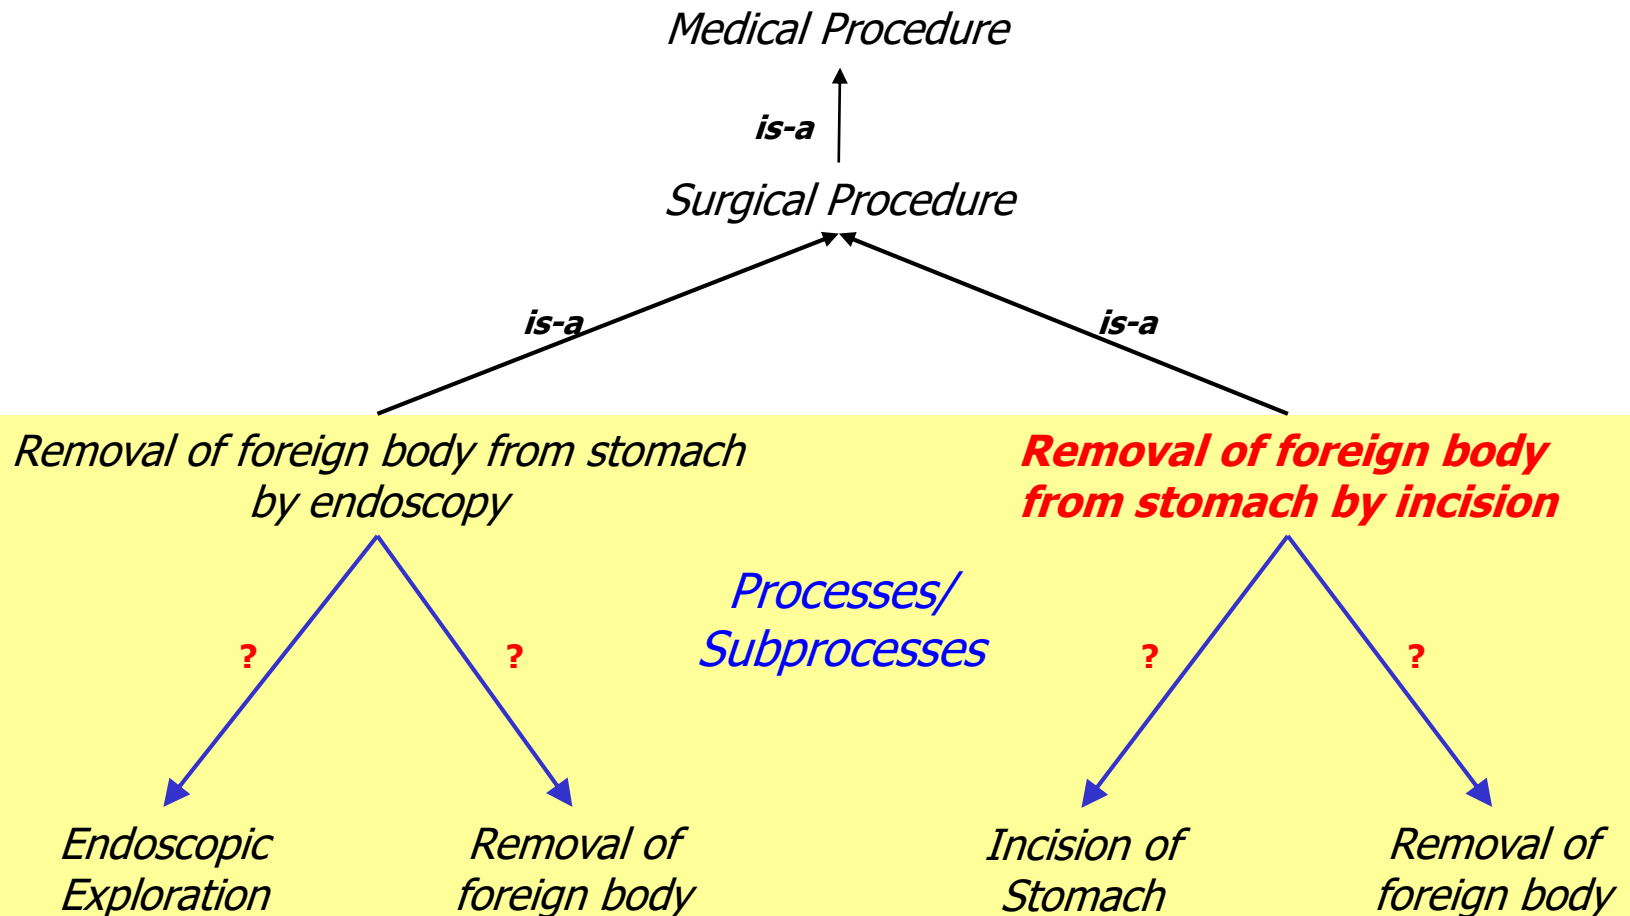

# Parent and Child Processes

*Taxonomy of Processes:  
is-a relation between parent and child processes*

# Processes and Subprocesses

# How to semantically relate processes with their subprocesses

---

1. A (complex) process is subsumed by its subprocesses:
  - Subprocesses do not exist simultaneously. An instance of ***Removal of foreign body from stomach by incision*** is first an instance of *Incision of stomach* and then becomes an instance of *Removal of foreign body*
2. Subprocesses are temporal parts of a (complex) process :
  - A complex process can be aborted before completion. The complex process ***Removal of foreign body from stomach by incision*** can only be instantiated if the subprocesses have been completed.

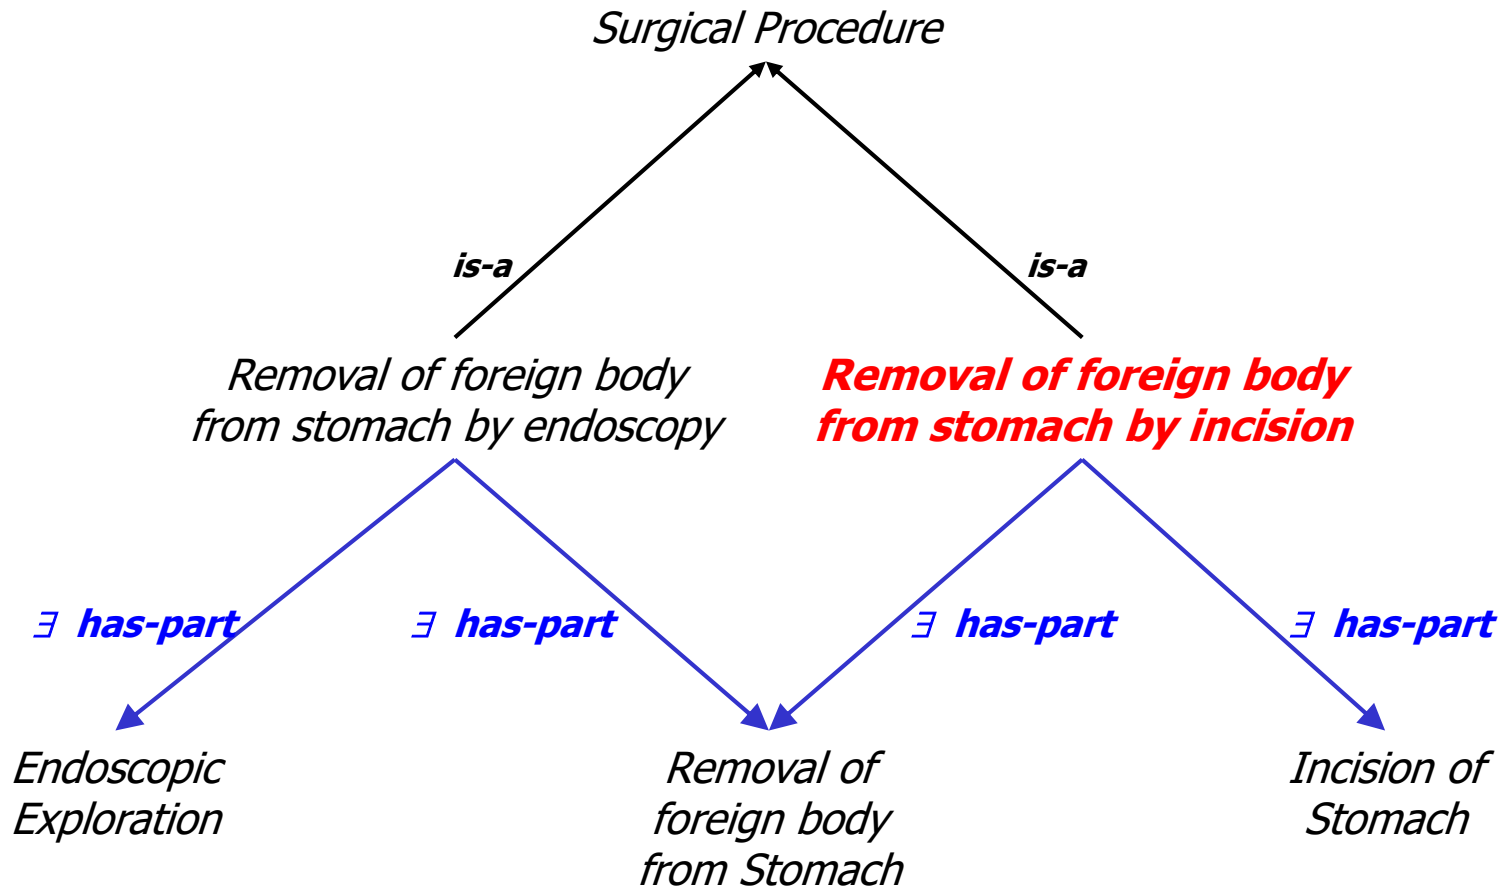

# Theory 1: A (complex) process is subsumed by its subprocesses

---

# Theory 2: Subprocesses are temporal parts of a (complex) process

---

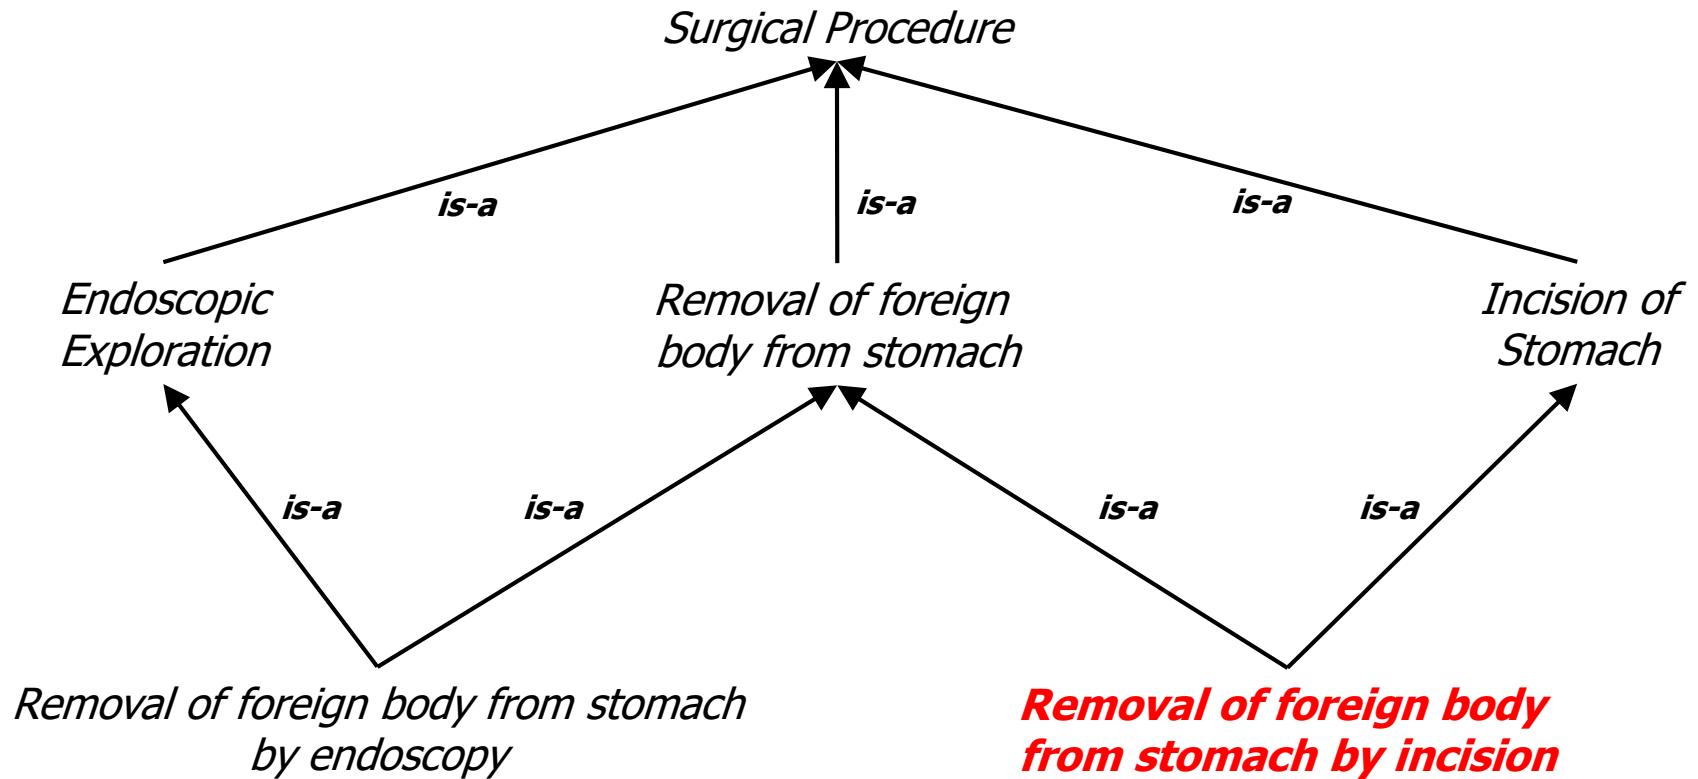

# Representation in SNOMED CT

<b>SNOMED® Concept 1</b>	<b>SNOMED® Relationship</b>	<b>SNOMED® Concept 2</b>
<b><i>Removal of Foreign Body from the Stomach by Incision</i></b>	<i>Is A</i>	<i>Removal of foreign body from digestive system</i>
	<i>Is A</i>	<i>Removal of foreign body from stomach</i>
	<i>Is A</i>	<i>Incision of stomach</i>
	<i>Method</i>	<i>Removal - action</i>
	<i>Direct Morphology</i>	<i>Foreign body</i>
	<i>Method</i>	<i>Incision - action</i>
	<i>Procedure site</i>	<i>Stomach Structure</i>

...compatible with Theory 1

# Theory 1: A (complex) process is subsumed by its subprocesses

 $\exists$  has-part. ( $\exists$  *Method.IncisionAction AND*  
 $\exists$  *ProcedureSite.stomachStructure*)

# Conclusions

---

- Relationship groups in SNOMED CT may represent the mereological relation between procedures / actions / processes and their parts.
- Suggest: Rename the relationship group attribute *RG* by *has-part* or *has-subprocess* in these cases.
- Make a clearer distinction between atomic classes (such as *IncisionAction*) and those classes which have atomic classes as parts (such as *IncisionProcess*). The present names are misleading.
