SNOMED's Ontogenetics

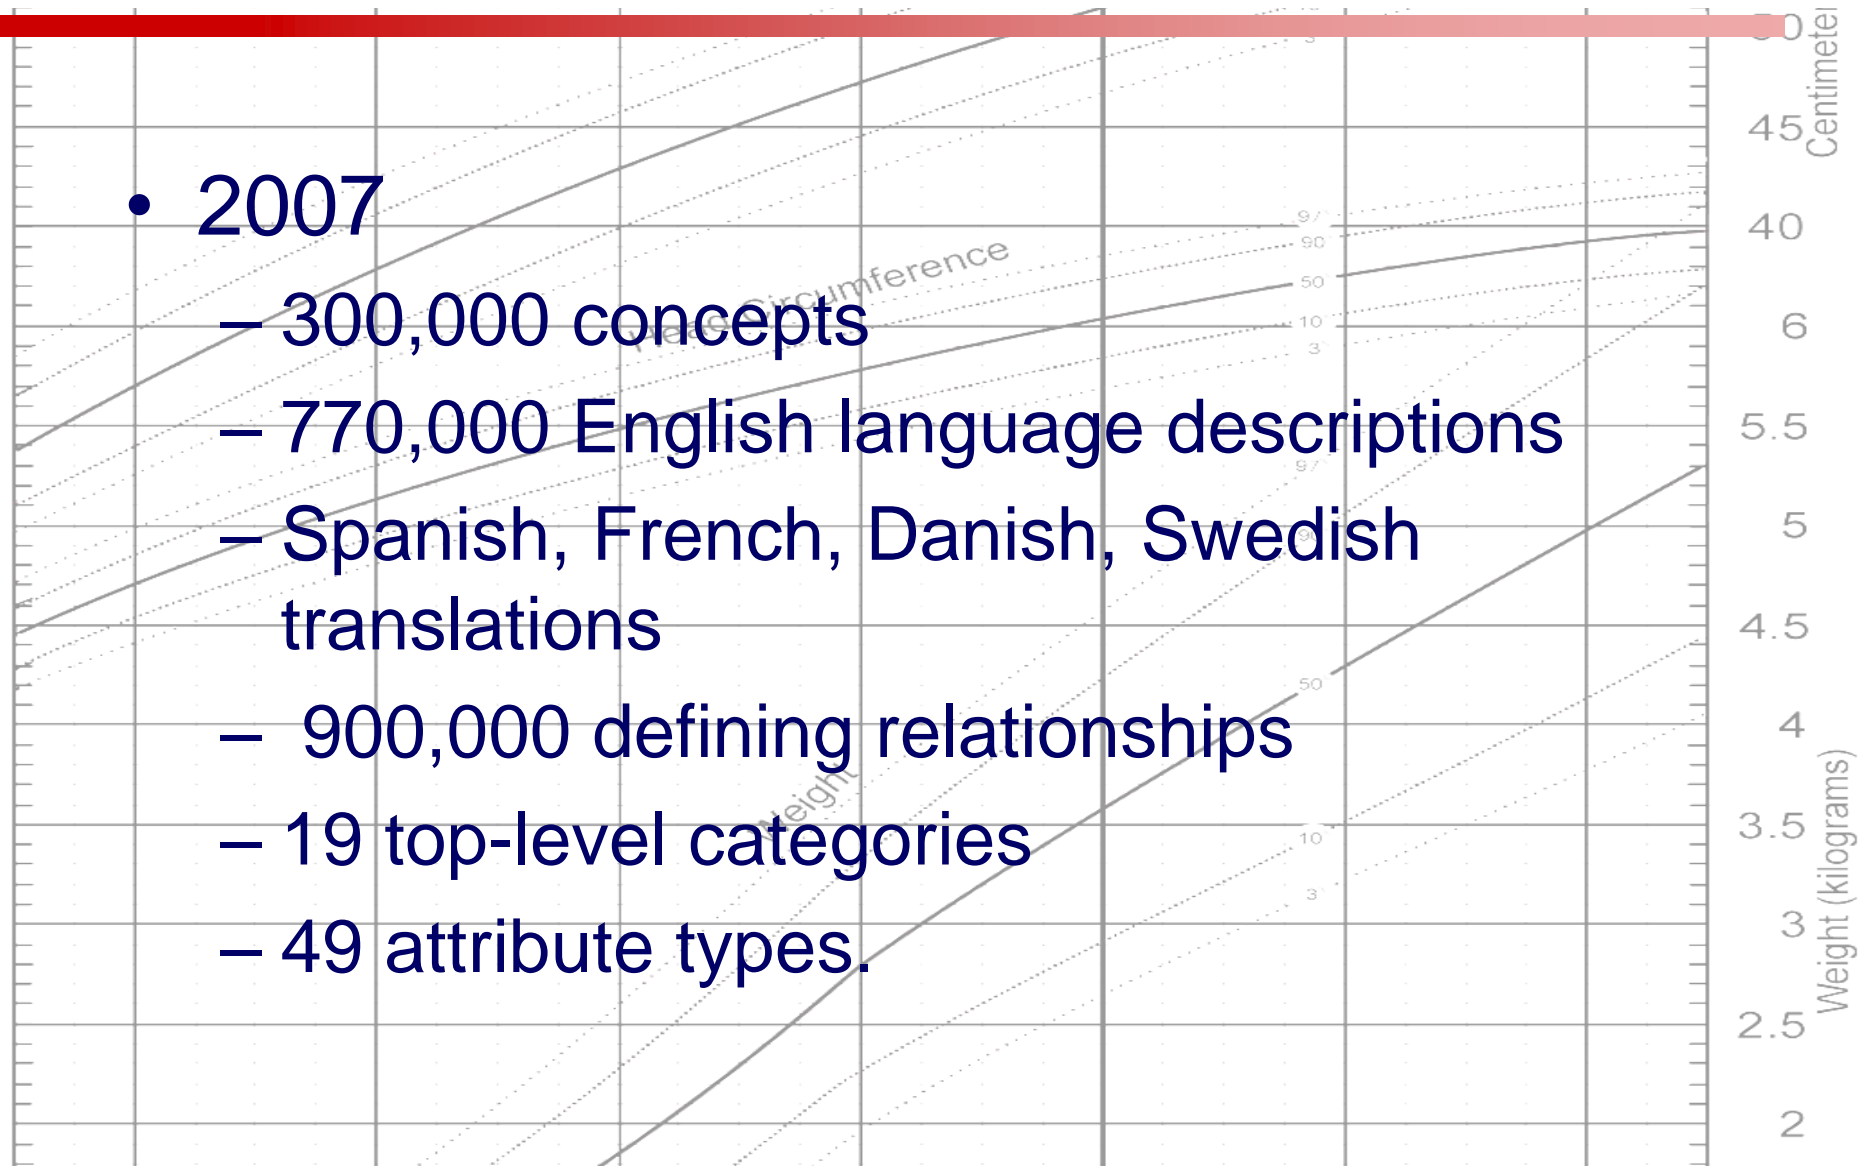

SNOMED's Ecological Niche and Natural Selection

- Changing Habitat:
 - Initially: Pathology
 - Present: Patient Care
 - Future: Whole Life Sciences ?
- Advantages for selection
 - need for globally standardized clinical terminology
 - flood of clinical and scientific data
 - emergence of applied ontology
 - availability of machine reasoning

SNOMED's Growth Chart and Vital Parameters

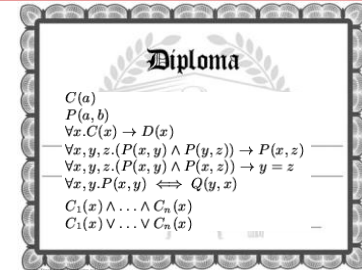

- 2007
 - 300,000 concepts
 - 770,000 English language descriptions
 - Spanish, French, Danish, Swedish translations
 - 900,000 defining relationships
 - 19 top-level categories
 - 49 attribute types.

SNOMED's Problem List

#1	Dystrophic Upper Level	
#2	Concept Borderline Disorder	
#3	Infestation by Individuals	
#4	Relation Idiosyncrasy	
#5	Taxonomic Dystrophy	
#6	SEP Implants	
#7	Partition Agenesis	
#8	Description Asthenia	
#9	Qualifier Syndrome	

Problem #1 Dystrophic Upper Level

SNOMED CT

SNOMED CT
concept

BASIC FORMAL ONTOLOGY (BFO)

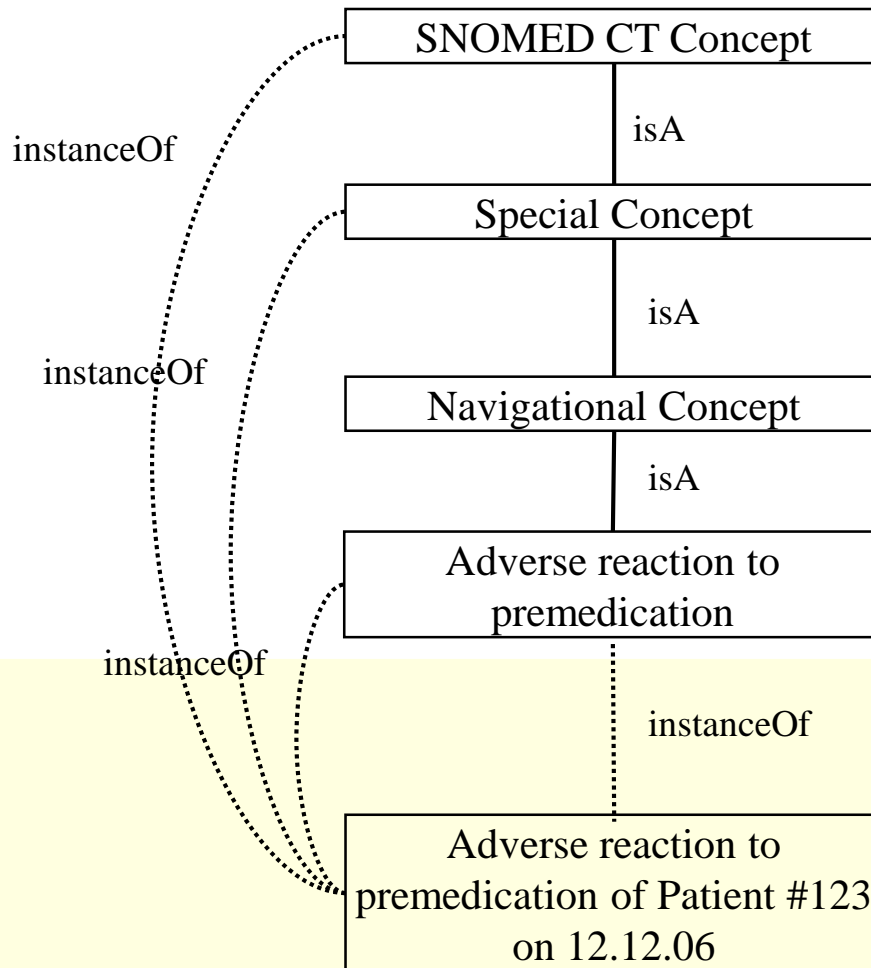

ENTITY

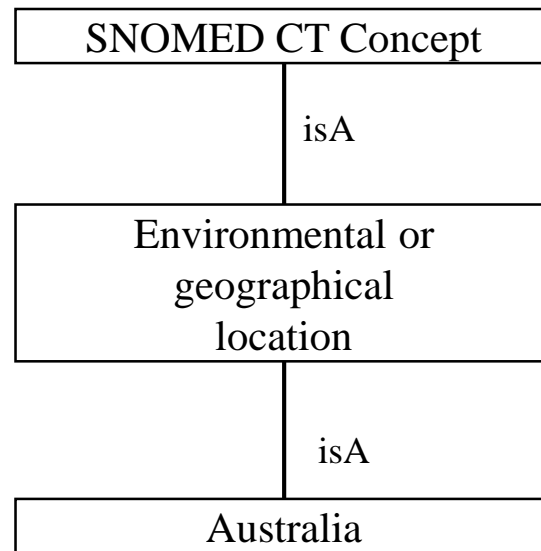

Upper level Ontologies

- Provide clearly defined categories that do not overlap
- The meaning of SNOMED CT's toplevel categories is often unclear and fuzzy
- META-categories (that refer to the concepts) are not clearly distinguished from concepts proper

Problem #2 Concept Borderline Disorder

Problem #3 Infestation by Individuals

What is an instance of Australia ??

instanceOf

Problem #5: Relation Idiosyncrasy

- Desideratum: use few, clearly defined relations (e.g. OBO relations):
instance_of, part_of, located_in, adjacent_to, earlier, derives_from, has_participant, has_agent
- SNOMED CT: relations not formally defined, fuzzy (“*Subject Relationship Context*”), obscure (“*Relationship Group*”)

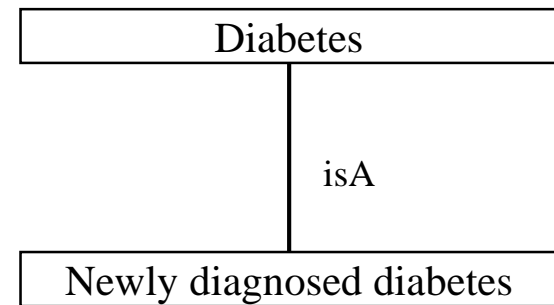

Problem #5 Taxonomic Dystrophy

“Is-A Overloading”

not every instance of bacterium is an infective agent!

“Epistemological Intrusion”

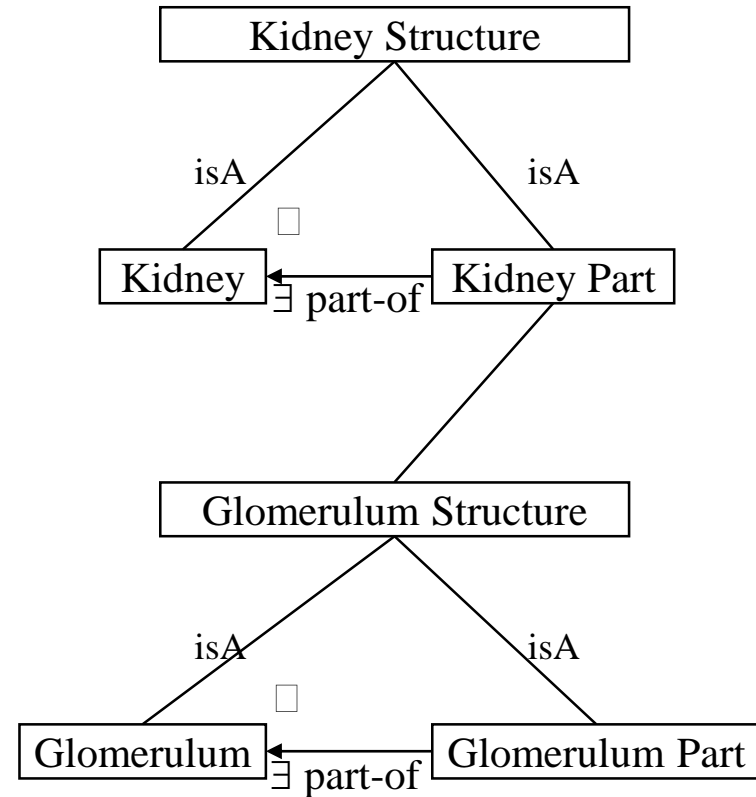

diabetes as such is not of a different type by the fact that it has recently been diagnosed

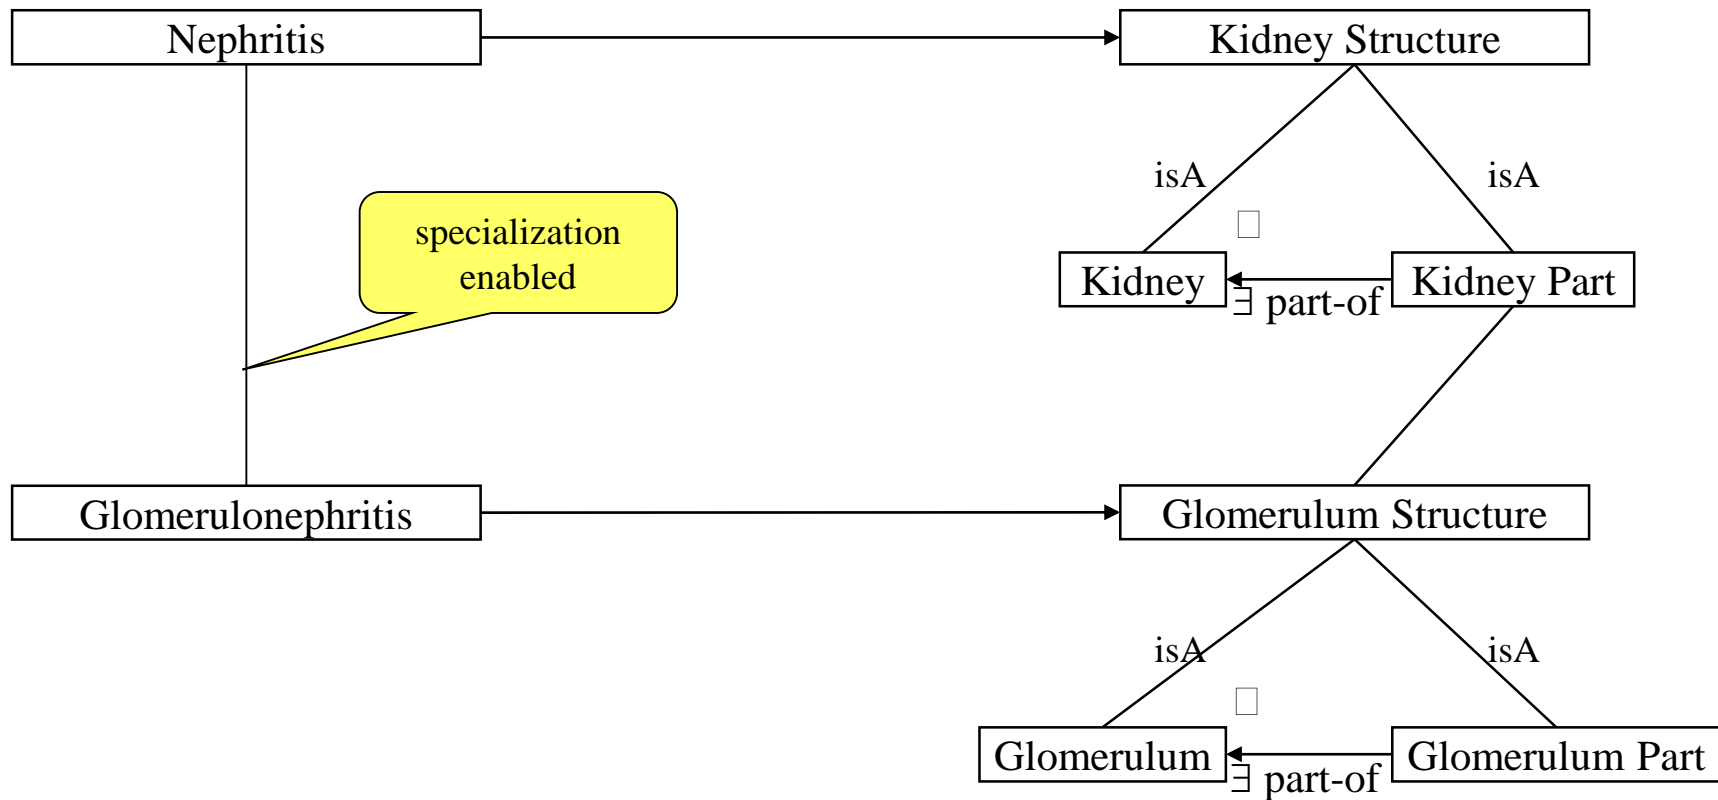

Problem #6 SEP Implants

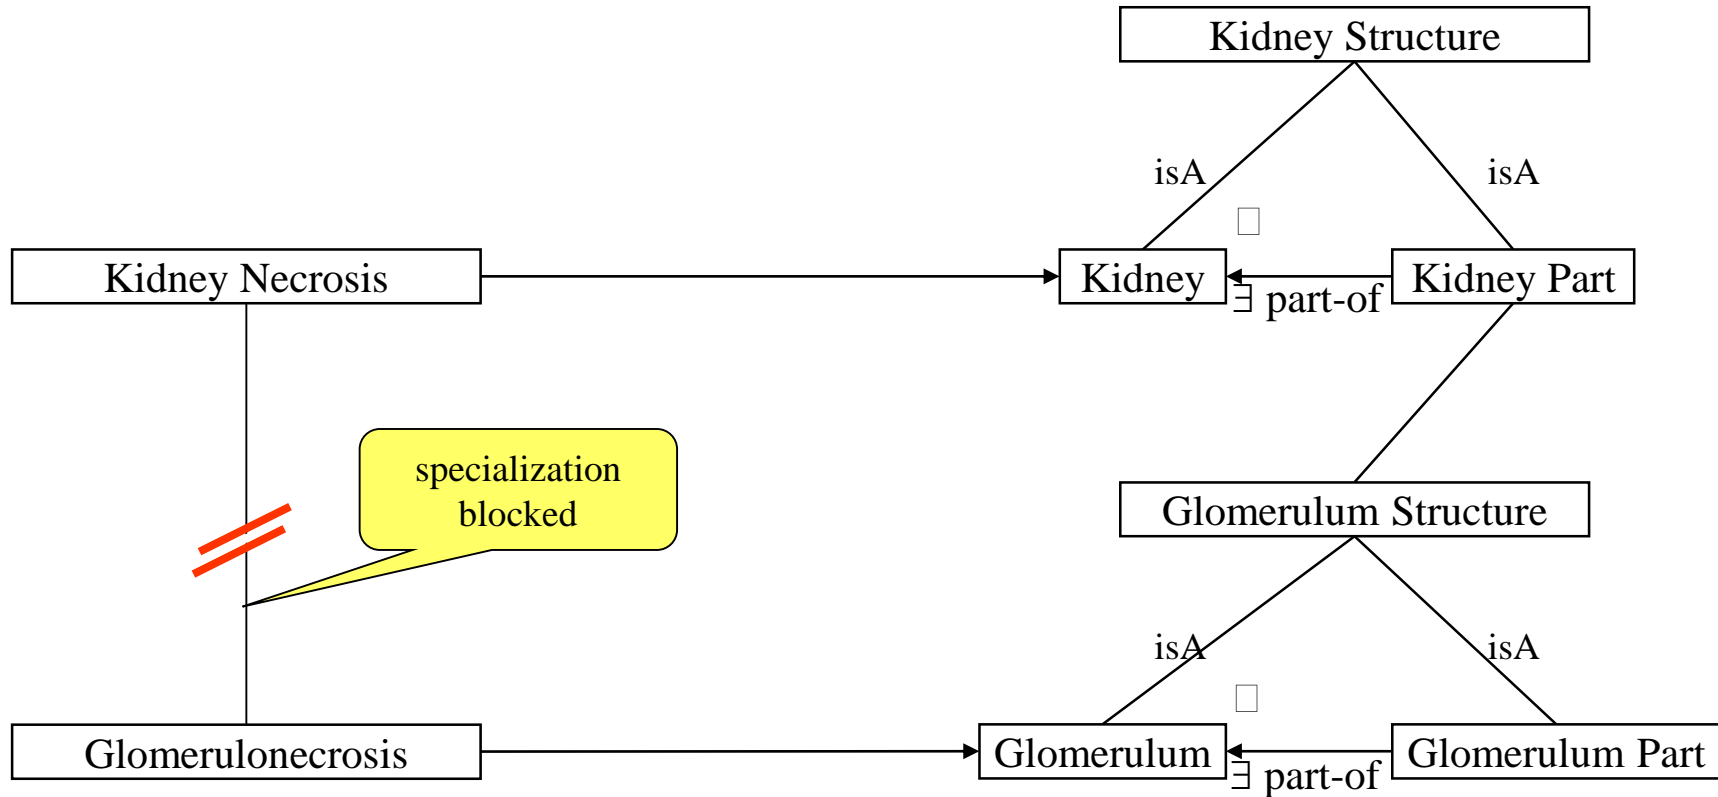

- “Prostheses” for expressing anatomical part-of relations as taxonomies
- Reason: to enable part-of reasoning with 2nd generation terminological reasoners

Problem #6 SEP Implants

Problem #6 SEP Implants

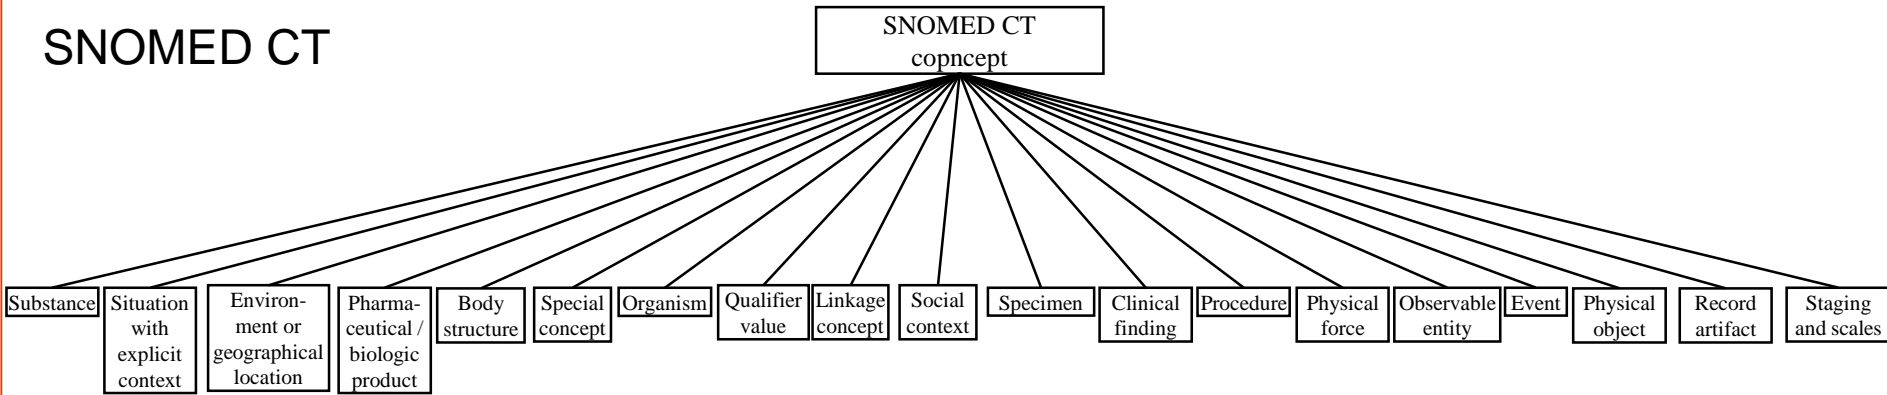

Problem #6 SEP Implants

- SNOMED CT uses the “specialization mode” even where incorrect
- SNOMED CT attaches the same term to the concepts and their “structure” sibling:
 - The term “Kidney” is attached to Kidney and Kidney-Structure. According to the extended SEP hierarchy, Glomerulum is a kind of Kidney structure. Consequently, a Glomerulum is a “Kidney”

Problem #7: Partition Agenesis

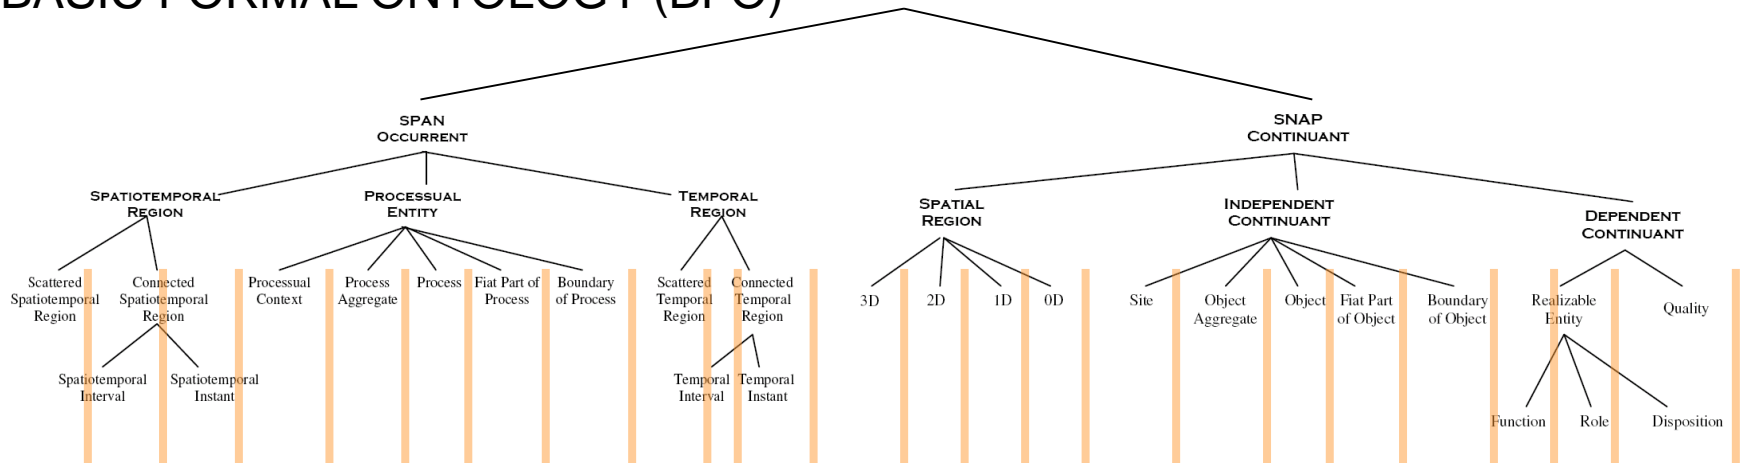

SNOMED CT

SNOMED CT
concept

BASIC FORMAL ONTOLOGY (BFO)

ENTITY

Problem #8: Description Asthenia

- Aristotelian Definitions:
definiendum \equiv genus \sqcap differentia specifica
Amputation of Foot \equiv Amputation \sqcap \exists has-target.Foot
- In SNOMED CT unnecessary primitive Defs:
Amputation of Foot \sqsubseteq Amputation \sqcap \exists has-target.Foot

Problem #9: The qualifier syndrome

- SNOMED CT qualifiers:
laterality, severity, onset, ...
- E.g., asthma allows the use of the qualifier severity with the value “severe”
- But the concept “severe asthma” is not defined in terms of this qualifier:
Severe Asthma \equiv Asthma $\sqcap \exists$ has-quality.Severe

SNOMED's Treatment Plan

#1	Dystrophic Upper Level	Level Rectification
#2	Co	s Isolation
#3	Infe	olerance of Individuals
#4	Re	construction
#5	Tax	leansing
#6	SE	and Substitution
#7	Partition Agnesis	taxonomy Partitioning Operation
#8	Description Asthenia	Definition Revitalization
#9	Qualifier Syndrome	Qualifier Transplant

*For Details, see
SNOMED CT's
Health Record:*

General Therapeutic Principles

- Adhesion to ontological standards: Upper-level Ontology (DOLCE, BFO), Open Biomedical Ontology (OBO) Relation Ontology
- Adhesion to logical standards: W3C Ontology Web Language (OWL-DL)
- Adoption of a computationally tractable description language (CEL++)
- Demarcate crisp interfaces
 - internally: between ontology and terminology components
 - externally: between SNOMED and information models
- Follow good classification principles

The Celestial Emporium of Benevolent Knowledge

Jorge Luis Borges

"On those remote pages
it is written that animals
are divided into:

- a. those that belong to the Emperor
- b. embalmed ones
- c. those that are trained
- d. suckling pigs
- e. mermaids
- f. fabulous ones
- g. stray dogs
- h. those that are included in this classification
- i. those that tremble as if they were mad
- j. innumerable ones
- k. those drawn with a very fine camel's hair brush
- l. others
- m. those that have just broken a flower vase
- n. those that resemble flies from a distance"
