

The “Common Ontology” between ICD 11 and SNOMED CT

medical plausibility vs. ontological soundness

Stefan Schulz

ICD-11 – SNOMED CT harmonization

- Background:
 - ICD: **Classification** maintained by WHO, currently under revision → ICD-11
 - SNOMED CT: **Ontology-based clinical terminology** maintained by IHTSDO (International Health Terminology Standards Development Organisation)
- Large content overlap between ICD and SNOMED CT disorder / findings hierarchy
- Joint Advisory Group (WHO and IHTSDO), based on institutional agreement:
 - Synergistic and not antagonistic terminology development
 - Jointly develop a **common ontological basis** for both ICD-11 and SNOMED CT
 - Maximum of interoperability between ICD and SNOMED coded data

Inventory of
clinicians'
language:
words, terms,
phrases

Categorization and
formal description of
domain entities:
clinical situations,
information entities,
taxonomies, partonomies

Purpose-specific
reporting units:
billing,
health statistics

SNOMED CT

ICD-11

Vocabulary

Inventory of
clinicians'
language:
words, terms,
phrases

Ontology

Categorization and
formal description of
domain entities:
clinical situations,
information entities,
taxonomies, paronomies

Classification

Purpose-specific
reporting units:
billing,
health statistics,
research,...

SNOMED CT

ICD-11

SNOMED CT

ICD-11

Vocabulary

Inventory of clinicians' language: words, terms, phrases

Desiderata: Ready-to-use terms, one-click encoding of complex statements

Desiderata: pragmatic orderings for specific purposes

Ontology

Categorization and formal description of domain entities: clinical situations, information entities, taxonomies, partonomies

Desiderata: context-independent, precise categorizations

Classification

Purpose-specific reporting units: billing, health statistics, research,...

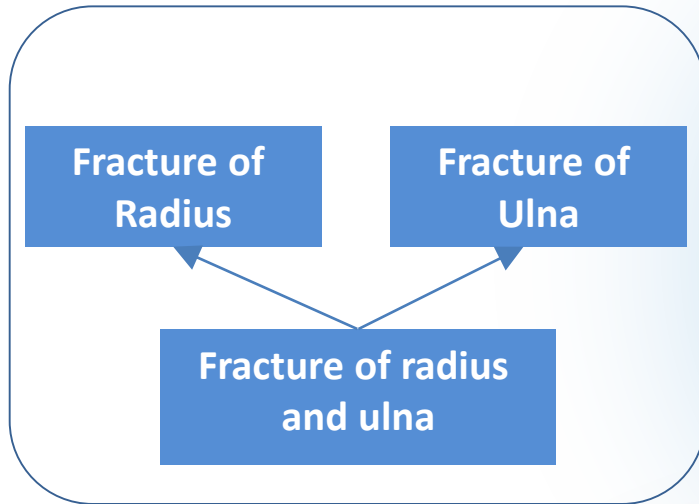

SNOMED CT

ICD-11

SNOMED CT Findings/Disorders and WHO – IHTSDO Common Ontology

Formal taxonomies of clinical situations

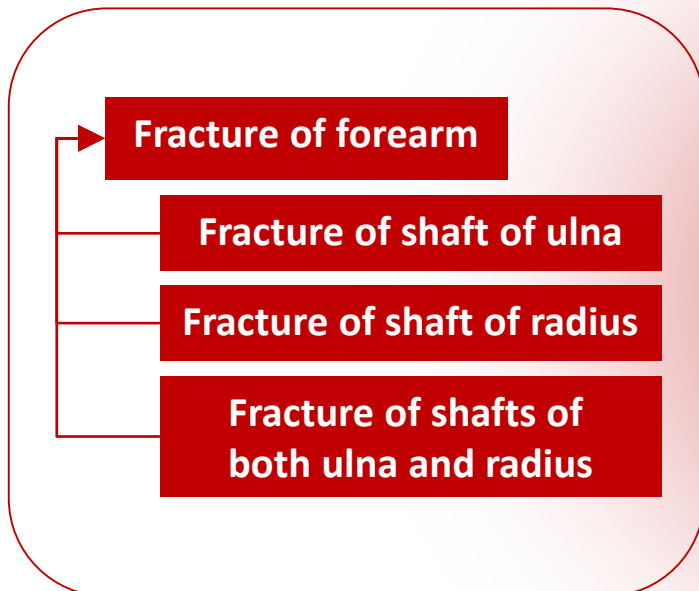

(life periods in which one or more
clinical conditions are present)

ICD-11

Linearizations

Hierarchical orderings of
reporting units
into disjoint “classes”

SNOMED CT Findings/Disorders and WHO – IHTSDO Common Ontology

Formal taxonomies of clinical situations

(life periods in which one or more
clinical conditions are present)

Multiple hierarchies:

Single hierarchies + exclusions

ICD-11

Linearizations

Hierarchical orderings of
reporting units
into disjoint “classes”

SNOMED CT Findings/Disorders and WHO – IHTSDO Common Ontology

Formal taxonomies of clinical situations

(life periods in which one or more
clinical conditions are present)

Strict taxonomic relations

Approximate taxonomies

ICD-11

Linearizations

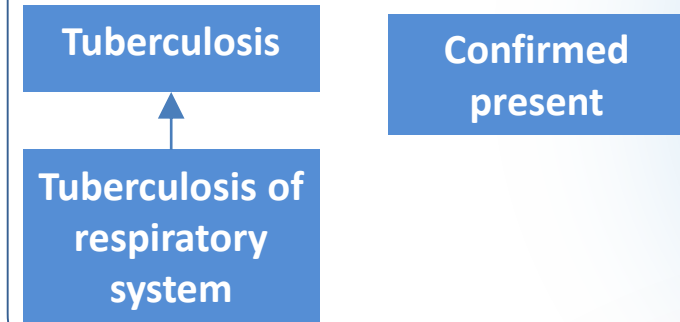

Hierarchical orderings of
reporting units
into disjoint “classes”

SNOMED CT Findings/Disorders and WHO – IHTSDO Common Ontology

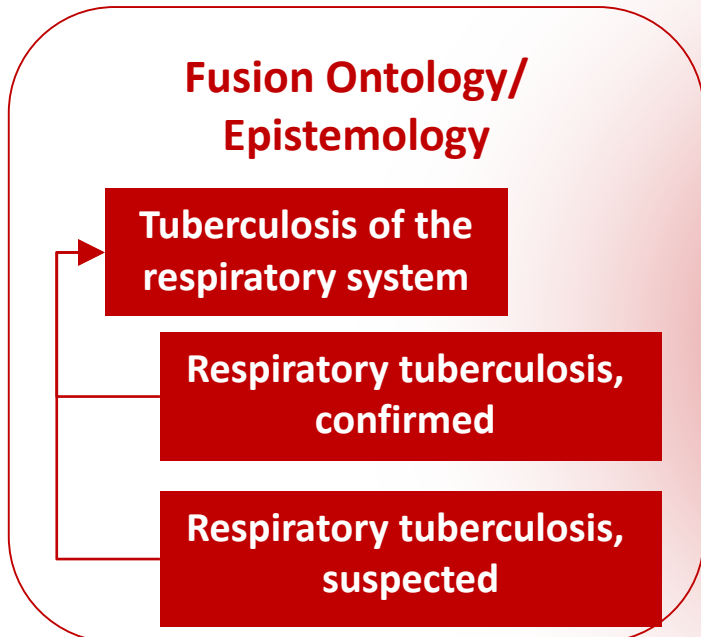

Formal taxonomies of clinical situations

(life periods in which one or more
clinical conditions are present)

Separation Ontology/ Epistemology

Fusion Ontology/ Epistemology

ICD-11

Linearizations

Hierarchical orderings of
reporting units
into disjoint “classes”

SNOMED CT Findings/Disorders and WHO – IHTSDO Common Ontology

Formal taxonomies of clinical situations

(life periods in which one or more
clinical conditions are present)

Mapping as Querying

Query mechanism, e.g.

X = select A minus select B

Y = select A and B

Z = select A and (rel C)

...

ICD-11

Linearizations

Hierarchical orderings of
reporting units
into disjoint “classes”
